

# CLEANING INSTRUCTIONS

The interior surface of the window shade material can be cleaned using a diluted mild detergent (such as Jif, Handy Andy, etc.) applied with a soft bristled synthetic brush. Apply the detergent to the interior surface of the shade using the brush to gently scrub the surface using a circular motion. Rinse with warm water and allow to dry completely before closing the shades for prolonged periods of time. A household hair dryer set to low heat can be used to expedite the drying process although care must be exercised to prevent the surface temperature of the shade material to exceed 82 Celsius (180 Fahrenheit).
